

Wednesday Walk at 'Bunhybee', Jerrabatgulla Creek – 11 November 2009

'Bunhybee' is 35km south of Braidwood, in southern N.S.W. It is a 49 hectare conservation property, mainly grassland with some *Eucalyptus pauciflora* woodland. 98% of the property is subject to a Conservation Agreement. This is effectively a permanent covenant, inscribed on the title; which means that the present and all future owners must conserve it in compliance with that Agreement. The remaining 1 hectare is available for a dwelling. The owners of the property have an informative website - <http://rogerclarke.com.au/Bunhybee/> We visited the property during peak flowering of many of the grassland plants – it was difficult to walk without damaging flowers. There were mass displays of *Leptorhynchus squamatus*, *Chrysocephalum apiculatum*, *Pultenaea subspicata*, *Gompholobium minus*, *Laxmannia gracilis*, many different grasses and lots of smaller displays - *Convolvulus angustissimus*, *Leptospermum lanigerum*, *Hakea microcarpa*, *Polygala japonica*, *Brachyscome rigidula*, *Calotis glandulosa*, *C. scabiosifolia* var. *integrifolia*, *Ranunculus lappaceus*, *Craspedia variabilis*, *Stylidium graminifolium*, *Utricularia dichotoma* and many other things too numerous to mention. A good variety of orchids - *Diuris chryseopsis*, *D. monticola*, *Diuris sulphurea*, *Hymenochilus bicolor*, *Microtis unifolia*, *Thelymitra juncifolia*, *T. pauciflora* and *Stegostyla moschata*.
